From rocket launching sites, it is getting into the Colorado river

Which rocket launching sites are near the Colorado river watershed?

and from there into the Imperial Valley where it is sucked up and concentrated by green leafy vegetables to an extent of concern, if not alarm.

Are you perhaps mixing your propellents and confusing hydrazine with ammonium perchlorate used in solid rockets and (IIRC) road flares? ISTR some concern about leakage from one or more _manufacturing_ sites finding its way into a watershed.

Yes, dag nabit. Thanks for tune up.
