I see a lot of people arguing both sides of the technology questions, such that they are, but near as I can tell there aren't any "real, concrete, get it done" plans for using any of the actual shuttle technology for future designs. It seems to my uneducated mind that it would be fairly simple to reuse the SSME's and SRBs for heavy lift designs which is what I think we still need. That's why I'm asking, are there any "real" plans to reuse the SSMEs and SRBs?
