Heh heh heh ... Go JAXA! Go Japan!

To kill all conspiracy, it would be fun to see a picture of all
the leftovers
from Apollo.

Henrik

You really think so? To a conspiracy nut the Kaguya pictures are also clearly
fakes, note the complete absence of stars from the released shots!

That is a normal thing. When a picture is taken from a planet (does not matter if it is Jupiter,
Saturn or Venus for example) the light reflected by that planet is very bright compared to the
light from the stars.

Try to take a picture from an object with the sun behind or next to it; the sun overexposes the
picture.

Duh. MichaelJP was being ironic. Conspiracy nuts don't understand that fact when applied to Apollo
photography; why would they suddenly see the light (so to speak) when it comes to Kaguya photography?
