there are several convergent variants of Nelder Mead known now:

Zbl 0962.65048 Kelley, C.T.

Detection and remediation of stagnation in the Nelder-Mead algorithm using a sufficient decrease condition. (English)

SIAM J. Optim. 10, No.1, 43–55 (1999).
(no guarantee of convergence though)

20. Zbl 1030.90122 Tseng, Paul
Fortified-descent simplicial search method: A general approach. (English)
SIAM J. Optim. 10, No.1, 269–288 (1999). MSC 2000:
(a mix of Torczon like steps with the Nelder Mead idea, in practice more
like a grid search)

Zbl pre01812445 Price, C.J.; Coope, I.D.; Byatt, D.
A convergent variant of the Nelder—Mead algorithm. (English)
J. Optimization Theory Appl. 113, No.1, 5–19 (2002)
(with proof of convergence, only minor modifications to the original nelder Mead)
