Richard,
Thanks for your reply.

"There is not any magic in "statistics" to determine a threshold."

Well, that's a big disappointment! Not to mention disallusionment. I thought that one of you statistics wizards would cough up a formula before breakfast that even an engineer could understand.

Will check out IMDB, and maybe Consumer Reports. Seems to me they deal with this issue all the time. What I thought, when I started, would be a simple inquiry has turned into quite a chase.
Thanks again.
