This subject has been raised a few times, but I think I need something a bit different from what most people look for. I'm looking for a comprehensive book on mathematical statistics. I have very good mathematical background and the book should be grad. level, but being comprehensive is more important than having rigorous proofs. I have to get an understanding of most topics of modern mathematical statistics. Currently I'm considering two most recommended choices :

Statistical Inference

by George Casella, Roger L. Berger

Mathematical Statistics: Basic Ideas and Selected Topics, Vol I (2nd Edition)

by Peter J. Bickel, Kjell A. Doksum

Any suggestions ?

.
