*** Luis, have you checked Erich Lehmann's book to see what he says about UMP unbiased tests for this problem? In particular, have you read his chapter on UMP unbiased tests for multiparameter exponential families?***

Ny response

Jack have you UNDERSTOOD that the procedure I posted (Monte Carlo simulations method) is PERFECTLY EXACT and I do not need any more *Theories* to know exactly to check that the variance should be (very approximately) evaluated by

$$\text{___var} = pA*(1-pA)/ nA + pB*(1-pB) /nB$$

if I do not want to spend 5 minutes to obtain the CI by simulation? Did you read?

__Program CIDIFF Aug. 18, 2006, 4:55 AM.

I´am a practical man that the ain objective in my professional life is (was) to reach the end the most straight I can.
