

$Z = U(0,1)*N(0,1) + U(0,1)*N(0,1) + \dots + U(0,1)*N(0,1)$  is distributed how?

**$Z = U(0,1)*N(0,1) + U(0,1)*N(0,1) + \dots + U(0,1)*N(0,1)$   
is distributed how?**

If I have a r.v.  $Z$  which is the sum of  $n$  products where each product is a Uniform r.v. multiplied by a standard normal r.v., what is the distribution of  $Z$ ? I am curious as I am simulating a factor loaded model with random numbers.

Thanks for you help in advance,  
Liam
