O.K.
IS TIME TO JACK LEON TOMSKY
to say us what his
$$\frac{p(y < 15 | x+y = 16)}{= 1 - \text{Sum} [C(10, 16-j) * C(30, j) / C(40, 16)] =}$$

licas (Luis A. Afonso)

You go back to the archives and find the number of times Jack Tomsky had explained that to you already.

As I repeated said, you have NO RIGHT to continue NOISE bullying Jack.

I noticed only this morning, that the number of subscribers to sci.stat.math dropped from 1296 to 1295, from a very stable 1296 for days.

I sincerely HOPE that the 1 dropout was NOT Jack Tomsky, because IF it is, it would be a tremendous LOSS to the entire sci.stat.math community, because he is one of the most knowledgeable mathematical statisticians in this group.

I don't expect Jack will response to YOUR NOISE bullying, and he shouldn't because he had already said what I repeated a dozen times to you in you last 20 or so bullying posts, that he was NOT going to waste time on Luis A. Afonso anymore.

I hope Jack will re-appear in some OTHER threads in sci.stat.math responding to OTHERS, as he has done.

You Luis Afonso had already done enough damage to sci.stat.math without having ANY visible contribution. You should take this as your FINAL signal to SHUT UP!

Re: Open REMINDER to Afonso on Netiquette

I was the ONLY person who has looked up the number of subscribers in sci.stat.math as well as scistatmath, just out of curiosity. The number of subscribers in scistatmath has decreased from 18 yesterday to 14 today,

There has NOT been a new thread in scistatmath since the 2nd thread of that group FOUR DAYS ago. That group is already DEAD.

beliasvky was VERY shortsighted in trying to blame the noise of this group on ME instead of YOU, and m00es, and Illywhacker, and Bob O'Hara, and Richard Ulrich, and a handful of others.

Perhaps Bob O'Hara was one of the dropouts from scistatmath.

He is already polluting the Bayesian thread on what Herman Rubin had clearly indicated that he was wrong, as any Bayesian can clearly see. But the extent of Anon Bob O'Hara's disruptive NOISE and faulty information dispensed in sci.stat.math pales in comparison with YOURS and those of others posting by the same name Luis A. Afonso!

You are clearly the ORIGINAL Afonso.

I even let your new thread about birthday problem stand, even though that thread had been beaten to death and NOBODY cares what you post anymore.

But as long as you only make a post, involving statistics or probability, I had always left you alone EXCEPT when you were making errors.

If you want to stay in this group, you are welcome to post anything that interests you in probability or statistics, as long as you stick your filthy nose out of other people's posts and keep your own ERROR free and keep your nose clean.
