If this is a Cambridge rocking microtome, it will last and cut down to 5um (wax and plastic embedded). If it's a cheap copy, who knows. Ask Brunel whether this one is actually made by Cambridge. The price is very low, so I assume it's a copy. I also think that it is unlikely that Brunel can offer a good microtome knife for this price. Remember, mostly you always get what you pay for. Did you consider looking for a used microtome and just purchase a new knife?
