But where's your image of the bulb? And its holder, with some dimensions.

The bulb is an 8018 X (with a rim). The 8018 won't work.

(It's just [remotely?] possible that I may have bought one a few years ago for my metallurgical version of the microscope. And I might know the UK supplier.)

And if you do go down the transformer route, remember that the nominal voltage in the UK is higher than yours in the US,

Yes, I know, thank you.

unless "animal rescue

groups" use special voltages <g>.

Ah, the infamous British wit--- well, at least half of it <g>

Phil
