I did not know that Olympus is selling out their stuff so cheaply.

I believe that the E600 with phase sells roughly for the same amount as the BX-51. The condenser alone costs more than \$600, the phase lenses (Plan Achrom only) are over 2k and the frame with trinoc is over 5,2k. How could he possible make this for 7k? I assume he also needs to pay CA taxes. After all, he ends up paying at least 9k for a complete system.

Forget the PlanFluor lenses at this budget. The 40x alone is over \$900. The phase version sells for more than \$1100.

Gregor

Well, another user got a new BX-51 with DIC and phase for about his price point of \$8K. He is very happy with the system.

The strategy for really good deals is to inquire about demo items. These are typically 25% off list.

What he wants is, IMO, attainable from Olympus. And the system works really well. Simple, efficient, no hassles.

Not my money. But I have three Oly stand systems and prefer them to Zeiss or Leica or Nikon. Again, not my money at issue.
