In a discharge, I found a Reichert episcopic microscope in the mud. I cleaned it and I made it working. It has only two objectives: 16 X and 80 X. They are of excellent quality.

Unfortunately, this microscope lacks of one or two objectives with intermediate power and I would like to buy them.

Their parfocal length should be 40 mm or less.

The tube length should be 250 mm or less.

I found that also the Wild objectives for episcopy are of high quality.

If you have objectives for episcopy suitable for that microscope, please tell me to giocar44@xxxxxxxx

.
