Greetings,

We are considering buying a high-end SEM for a central lab which will study materials, both conducting and non-conducting. I am wondering about individual experiences regarding the microscope performances and company support. I am inclined to think the comparable products of FEI, JEOL, Zeiss etc are all very good indeed. Furthermore the users of a certain product are almost always quite satisfied. So, if there are experienced users who can provide comparisons, I'd appreciate it.

Best Regards
